

Project Data Sheet

Project: Establishment of Long term Dredging Strategy Document, Milford Haven, UK.

Client: Milford Haven Port Authority (MHPA), UK

Project: Milford Haven is located within the Pembrokeshire Marine SAC and any new projects within the waterway are subject to specific regulation under the Habitats Directive to protect the highly sensitive environment present in the Haven and its hinterland. The need for a Dredging Strategy came through a desire to support and provide direction on dredging and related matters within the Management Scheme for the Pembrokeshire Marine SAC and also as a result of discussions between MHPA, MCU and CCW regarding longer term strategic planning requirements for offshore disposal arrangements. Anthony D Bates Partnership as the Port's consultants were employed to develop this document.

This document establishes a baseline of dredging related information that can be used to inform relevant authorities on the history of dredging within Milford Haven as well as setting out the anticipated maintenance dredging requirements within the Haven in the near future. It is also intended that it be used in conjunction with any future capital dredging works that may be required, It is intended that this document will be used to inform Appropriate Assessment that accompany any MHPA Dredging consent applications and also in connection with sea disposal applications under FEPA for the sea disposal of all dredging risings within Milford Haven.

Dates Most recent study completed 2011.
