

Project Data Sheet

Project	Marine Works License Application and Natura Impact Statement
Client	Murco Petroleum Limited
Project	<p>ADBP were employed by Murco Petroleum Ltd to undertake a redesign of their main berth at their marine facility within Milford Haven. The results of this study highlighted several locations where localised sedimentation was having a significant impact on the allowable advertised depth. This was impacting on trade cargos.</p> <p>To alleviate this issue a small dredging campaign was proposed. However, the proposed berth was not contained within the Haven's Maintenance Dredging License. Therefore, a marine works license was required to be attained from Milford haven Port Authority to allow the works to be completed.</p> <p>ADBP undertook this license application on behalf of Murco after planning the specific details of the dredging campaign. As the berth was within a Special Area of Conservation an Appropriate Assessment (AA) was required to be carried out by the local Competent Authority. ADBP completed a Natura Impact Statement to inform the AA and successfully attained the required license.</p>
