Project

Multi Year Surveying Contract

Client

Milford Haven Port Authority (MHPA)

Project

Milford Haven Port Authority employed ADBP to prepare and supervise a multi year surveying contract. This contract had several elements to it:

- 1) To survey waters within the jurisdiction of MHPA during 2009.
- 2) An option to survey all of the berthing facilities at the same time.
- 3) To provide annual surveys of the berthing facilities and areas of likely sedimentation for a further 4 years up to 2014.
- 4) To provide emergency survey support as and when required from award of contract up to the 5th anniversary of the contract in 2014.
- 5) Provision of pre and post dredge survey facilities during the period from the award of contract up to 2014.

The results of the surveys will be used to check on channel depths, assess areas of concern, computation of volumes and also to assess sedimentation rates. The survey information will be used to update charts and provide up to date information for inclusion in the 'Dredging Strategy' for Milford Haven. ADBP invited Tenders for the provision of hydrographic survey services were invited from 8 selected specialist contractors and after consultation with the client awarded the contract to achieve both the best service and value for money for the client over multiple years.
